

**Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the application:

Claims 1-51. (cancelled)

52. (currently amended) A method comprising:

(a) providing contact between an aqueous solution containing one or more metal anion complexes and an organic solution including a diquatary amine, wherein the diquatary amine has two diquatary nitrogens spaced at a distance of less than about 10 Å;

(b) selectively binding at least one of the one or more metal anion complexes to the diquatary amine; ~~and then~~

(c) separating the organic solution from the aqueous solution, wherein the diquatary amines having the selectively bound metal anions are concentrated in the organic solution and the balance of the one or more metal anion complexes are concentrated in the aqueous solution; ~~and~~

(d) back-extracting the selectively bound metal anions from the diquatary amines into an aqueous acid.

53. (cancelled)

54. (currently amended) The method of claim ~~53~~52, further comprising:

(e) separating an organic diquat solution from the aqueous acid containing the one or more metal anion complex.

55. (currently amended) The method of claim ~~54~~53, further comprising:

(f) reusing the organic diquat solution separated by step (e) in step (a)

56. (currently amended) The method of claim ~~54~~53, further comprising:

(f) reusing the aqueous acid separated by step (e) in step (d).

57. (currently amended) The method of claim ~~54~~53, further comprising:

(f) separating the one or more metal anion complexes from the solution.

58. (currently amended) The method of claim ~~54~~53, wherein the step of separating the one or more metal anion complexes includes electrodeposition onto an electrode.
